

U.S. Patent Application Serial No. 09/822,617  
Attorney Docket No. 03226/090001; P5702

IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently Amended) A voice-translating remote control comprising:
  - a microphone operable to receive a nontrivial voice command and output a nontrivial voice signal;
  - an audio transmitter operably connected to the microphone to transmit an audio input signal to a host system based on the nontrivial voice signal;
  - a signal receiver arranged to receive a command signal transmitted by the host system; [[and]]
  - a signal transmitter operably connected to the signal receiver to transmit a control signal to an appliance based on the command signal [[.]] ;  
and
  - a user interface configured to display contents of the command signal.
2. (Original) The remote control of claim 1, wherein the signal transmitter is one selected from the group consisting of an infrared transmitter and a radio frequency transmitter.
3. (Original) The remote control of claim 1, wherein the audio transmitter transmits the audio input signal to the host system via wireless communication, and the host system transmits the command signal to the signal receiver via wireless communication.
4. (Original) The remote control of claim 1, further comprising a memory for storing appliance identity information.
5. (Previously Presented) The remote control of claim 4, further comprising a nontrivial speech-recognition processor for extracting appliance identification information from the nontrivial voice signal.
6. (Currently Amended) The remote control of claim 1, ~~further comprising a user interface~~ wherein the user interface is a liquid crystal display (LCD).

U.S. Patent Application Serial No. 09/822,617  
Attorney Docket No. 03226/090001; P5702

7. (Cancelled)
8. (Currently Amended) A voice-translating remote control system comprising:
- a host system comprising a host receiver, a nontrivial speech-recognition processor, and a host transmitter, wherein the host receiver is operably connected to the nontrivial speech-recognition processor, which is in turn operably connected to the host transmitter; and
  - a remote control comprising
    - a microphone operable to receive a nontrivial voice command and output a nontrivial voice signal,
    - an audio transmitter operably connected to the microphone to transmit an audio input signal to the host system based on the nontrivial voice signal,
    - a signal receiver arranged to receive a command signal transmitted by the host system, and
    - a signal transmitter operably connected to the signal receiver to transmit a control signal to an appliance based on the command signal~~[[.]]~~; and
    - a user interface configured to display contents of the command signal.
9. (Currently Amended) The voice-translating remote control system of claim 8, ~~wherein the remote control further comprising a user interface.~~ the user interface is a liquid crystal display (LCD).
10. (Original) The voice-translating remote control system of claim 8, wherein the audio transmitter transmits the audio input signal to the host system via wireless communication, and the host system transmits the command signal to the signal receiver via wireless communication.
11. (Original) The voice-translating remote control system of claim 8, wherein the signal transmitter is one selected from the group consisting of an infrared transmitter and a radio frequency transmitter.

Attorney Docket No. 03226/090001; P5702

12. (Cancelled)

13. (Cancelled)

14. (Cancelled)

15. (Currently Amended) A voice-translating remote control comprising:

- a microphone to receive a nontrivial voice command and output a nontrivial voice signal;
- a first transmitter means operably connected to the microphone for transmitting an audio input signal to a host system based on the nontrivial voice signal;
- a receiver means for receiving a command signal transmitted by the host system;
- a second transmitter means operably connected to the receiver means for transmitting a control signal to an appliance based on the command signal; and
- a user interface for validating the command signal, wherein the user interface is configured to display contents of the command signal.

16. (Cancelled)

17. (Currently Amended) A method for controlling an appliance using voice commands comprising:

- receiving a nontrivial voice command by a microphone in a remote control and outputting a nontrivial voice signal;
- transmitting an audio input signal based on the nontrivial voice signal to a host system comprising a host receiver, a speech-recognition processor, and a host transmitter;
- processing the audio input signal by the speech-recognition processor to generate a command signal;
- transmitting the command signal to the remote control;
- receiving the command signal by the remote control;

U.S. Patent Application Serial No. 09/822,617  
Attorney Docket No. 03226/090001; P5702

wirelessly transmitting a control signal to the appliance based on the command signal; and

validating the command signal received by the remote control using a user interface, wherein the user interface is configured to display contents of the command signal.

18. (Original) The method of claim 17, wherein transmitting the audio input signal to the host system is via wireless communication and transmitting the command signal to the remote control is via wireless communication.
19. (Cancelled)
20. (Cancelled)
21. (Cancelled)
22. (New) The voice-translating remote control of claim 1, wherein the user interface comprises functionality to modify the contents of the command signal.
23. (New) The voice-translating remote control system of claim 8, wherein the user interface comprises functionality to modify the contents of the command signal.
24. (New) The voice-translating remote control of claim 15, wherein the user interface comprises functionality to modify the contents of the command signal.
25. (New) The method of claim 17, wherein the user interface comprises functionality to modify the contents of the command signal.
